

### **REVIEW FORM – CORE SKILLS IN LAPAROSCOPIC SURGERY**

This review form will help us know about the benefit of the course in your practice. We welcome your suggestions if any to improve ourselves.

1. How will you rate the course with respect to clinical practice?

The course taught the basics of laparoscopy, the various stations for hand eye co-ordination like the stalking of sugar cubes, shifting of pearls, etc. really helped with the depth of perception. Overall a much needed short course to get going in the world of laparoscopy

2. Have you started using skills learnt in the course? **Yes**

3. Do you perform laparoscopic surgery on your own? **Yes**

4. Do you assist laparoscopic surgery? If yes, what is the role you play as assistant?

First assistant and also at times the operating surgeon

5. Is there improvement in your surgical skill with respect to quality, speed/time after completion of course? **Yes**

Knotting practice helped a lot, also the hands-on on animal tissue was very helpful.

6. Would you like to attend advance course? **Yes**

7. Do you have any suggestions / comments?

The course should include some basic surgical live workshops like, appendectomy, cholecystectomy.

Insertion of camera port should be taught in detail.

Trouble shooting will be better understood if taught in a live situation rather than just theory.

Overall great efforts

Thank you.
